

Sharpes Multifeed Nuts

KEY BENEFITS:

- Supports high ovulation and conception rates
- Improved weaning weights – both ewes and lambs

Sharpes Multifeed is also suitable for a wide range of animals including beef cattle, goats and deer.

SHARPES MULTIFEED NUTS is a high energy feed that, when fed pre-tupping, can be very beneficial to ewe flock performance.

Good nutrition pre-tupping helps support high ovulation and conception rates. The benefits of a high energy supplement pre-tupping can be seen all the way through to weaning weights of both ewes and lambs.

BAG SIZES: 20kg, 1/2 tonne and 1 tonne bags.

WHY SHARPES MULTIFEED?

- Ingredients processed into a nut, reduces wastage and increases utilisation
- Lower starch levels than raw grains, reducing the risk of acidosis
- High levels of digestible and metabolizable energy
- High quality Soya protein to supplement low pasture levels that are often present during mating periods
- A range of trace elements and vitamins
- From our farm to yours – locally sourced grains and ingredients.

INGREDIENTS SELECTED FROM: Locally sourced grains and cereals; plant proteins, molasses, limestone, macro and trace minerals & vitamins.

FEED RECOMMENDATIONS:

Lighter ewes/hoggets: Recommended feeding rate is 350g/head/day.

Rams and ewes: Recommended feeding rate is 200g/head/day:

- Feeding rates depend on many varying factors, such as pasture availability and quality, and the age and condition of the sheep. This can make it difficult to apply one rule for feeding, as every feed situation, farmer and farm is different.
- To see the greatest benefits of a pre-tupping supplementary feed, begin feeding 4 to 6 weeks prior to tupping, and throughout the tupping period.

Sharpes Multifeed Nuts

- Introduce Multifeed slowly at around 50g/head/ day for the first few days, then increase gradually over the next week to 250g/head/day.
- If feeding lighter ewes and hoggets, allow another week to increase up to 350g/head/day.

Deer: Fawns - up to 250g daily. Adults - up to 500g daily

Cattle: Up to 3kg daily

Goats: Kids - up to 200g daily. Adults - up to 350g daily

TOP TIP: Multifeed is best fed in a long line, as this reduces competition and wastage. Ensure your animals have access to fresh, clean water and forage at all times.

Contains nutritional levels of cobalt, iodine, copper, manganese, zinc and selenium, as well as vitamins A, D and E. If supplementing these trace elements in other ways (pasture, drench or injection) then please consult with your veterinarian.

TYPICAL ANALYSIS (approximate on an as fed basis):

Crude Protein 12% ME 12 MJ/kg

STORAGE: To maintain quality please store product in a cool, dry and vermin free environment. Best fed within six months of production.

CAUTION: Not to be fed to any other animal species than those recommended on the label.
